

Learn**Query****Analyze****Write**

The Problem

In a South Florida high school, teachers had a difficult time communicating with their students and providing individual timely feedback and analysis regarding their writing assignments. They were looking for a tool to enable better communication with their students and provide prompt feedback, guidance, and suggestions to improve student writing and outcomes.

The Solution

Queralyze provided teachers with its modular assessment system designed to streamline the grading process and increase communication between students and teachers. The system allowed the teachers to track a paper as it evolved. Queralyze's Writeturn™ system breaks the writing process down into six steps—research the question, create a reference list, annotate the bibliography, outline, draft, and complete the final product. Instructors were able to review a student's work at each step of the process and provide confirmation and prompt feedback.

The Results

Over the course of 3 months, teachers reported that students' performance improved by **20%** on assessments. The improved, prompt communication between student and teacher, throughout the writing process, kept students motivated to perform better. Teachers reported that they were better able to identify where students were having the most difficulty and, by communicating directly and at each step of the assignment, the revision and resubmission times were reduced considerably.

About Queralyze

Queralyze is a Software as a Service (SaaS) educational platform that augments high school teachers' efforts in the classroom. The system supports individualized student learning to improve critical thinking skills, grades, and writing.
